

PUBLIC SMOKING

DON'T LIGHT IT

Did you know that at least 150,000 respiratory infections are caused to infants each year in the USA! But most of this essay is about for and against smoking in public places.

There are several reasons for banning public smoking. These are some of the reasons. There are thousands of cases of lung cancer and ten times as much cases of heart disease each year to just second hand smoking! Plus, children with parents who smoke more at risk of illness. It can give the children pneumonia, bronchitis, middle ear infections, a bad cough, and serious asthma attacks. That's how it can affect people.

These are the reasons why smoking in public should not be banned. Many people say that telling people they can't smoke in public places is violating their personal rights. Others say it's wrong to ban cigarettes but still tax the products.

Some people say that they work better in smoking areas. They should choose to work in those conditions. These conditions are allowed in Jobs like mining, fishing, and armed forces.

In conclusion, my opinion about smoking in public places is that I think people should be allowed to hurt themselves. If they want to hurt themselves that way I say let them. Hopefully you have learned something by reading this.
