

Should Smoking Be Allowed in Public?

About 126 million nonsmokers are been banned in most public places like restaurants and bars. This essay is about for or against banning smoking in public places.

Smoking can cause pneumonia, bronchitis, coughing and wheezing, middle ear infections, and serious asthma attacks.

Cigarettes contain horrible things like rat poisoning and rocket fuel. Not to mention the chemicals used to treat the tobacco plant.

Although smoking is bad, some people say it takes away people's rights. Also people say that it is just as bad as breathing in fumes from car exhausts, or smoke from a camp fire.

Smoking is not good for you but is just as bad as an exhaust. I think that there should be special places for people to smoke. But they should really think about the fact that they are slowly killing themselves.
