

Smoking in Public Places

People back then new that smoking was bad. Smoking started in the 1960s they had restrictors in some places. I am writing about the good and the bad about smoking.

In the U.S 150,000 respiratory infections each year. Smoking causes pneumonia, bronchitis, middle ear infections and asthma.

People have places where they can smoke in public. They should be allowed to smoke as long as they are being considerate.

Well, do you think that we should ban smoking? My opinion is that we should because it causes a lot of diseases.
